

DESTINY

FUNKO POP! COLLECTION TRACKER

Technical Documentation & Developer Reference

Generated: 07 June 2026

Version	v4 (index.html + img/ folder)
Stack	HTML5 · CSS3 · Vanilla JavaScript · No dependencies
Hosting	Static — GitHub Pages, local file system, any web server
Data	21 figures / variants across 3 waves
Images	20 JPG files in img/ folder
Persistence	localStorage (per browser) + JSON export/import
Author	André Silva
File size	index.html ~34 KB img/ ~573 KB Total ~607 KB

IMPORTANT — SELF-CONTAINED REFERENCE

This document contains the complete technical reference for the tracker, including all data structures, CSS variables, JavaScript functions, and step-by-step instructions to rebuild it from scratch without any external tools.

Table of Contents

1. Project Structure

- File & folder layout
- Technology stack

2. Architecture Overview

- HTML skeleton
- CSS custom properties
- JavaScript module map

3. CSS Reference

- Design tokens (variables)
- Component classes
- Limited Edition styles
- Responsive breakpoints

4. Data Layer

- Pop object schema
- Complete figures catalogue
- Wave colour map

5. JavaScript Functions

- `itemKey()`
- `makeCard()`
- `render()`
- `updateStats()`
- `setView()`
- `exportCollection()`
- `importCollection()`
- `showToast()`

6. Export / Import System

- JSON schema
- `localStorage` key

7. GitHub Pages Deployment

8. Adding New Figures

9. Full Source Code

1. Project Structure

1.1 File & Folder Layout

The tracker is a static website. No build step, no package manager, no server required. The only requirement is that `index.html` and the `img/` folder are in the same directory.

Project tree

```
destiny-funko-pop/
  index.html      Main application (HTML + CSS + JS, ~34 KB)
  img/            Product images (20 JPG files, ~573 KB)
    234-funko-pop-figure-destiny-cayde-6.jpg
    235-funko-pop-figure-destiny-lord-shaxx.jpg
    236-funko-pop-figure-destiny-ikora-rey.jpg
    236-funko-pop-figure-destiny-ikora-rey-translucent.jpg
    237-funko-pop-figure-destiny-zavala.jpg
    238-funko-pop-figure-destiny-oryx.jpg
    239-funko-pop-figure-destiny-xur-agent-of-nine.jpg
    241-funko-pop-figure-destiny-atheon.jpg
    241-funko-pop-figure-destiny-crota.jpg
    241-funko-pop-figure-destiny-crota-chase.jpg
    337-funko-pop-figure-destiny-suraya-hawthorne.jpg
    338-funko-pop-figure-destiny-amanda-holliday.jpg
    339-funko-pop-figure-destiny-osiris.jpg
    339-funko-pop-figure-destiny-osiris-gold.jpg
    340-funko-pop-figure-destiny-cayde-6-with-chicken.jpg
    341-funko-pop-figure-destiny-cayde-6-with-golden-gun-gold.jpg
    342-funko-pop-figure-destiny-sweeper-bot.jpg
    343-funko-pop-figure-destiny-dominus-ghaul.jpg
    344-funko-pop-figure-destiny-emperor-calus.jpg
    962-funko-pop-figure-destiny-cayde-6-glow-in-the-dark.jpg
```

1.2 Technology Stack

Technology	Usage	Notes
HTML5	Structure / markup	Semantic elements, SVG inline
CSS3	All visual styling	Custom properties, clip-path, animations, grid
Vanilla JS	All application logic	ES6+, no frameworks, no dependencies
localStorage	Owned state persistence	Key: destiny_owned, value: JSON array
Google Fonts	Typography	Rajdhani, Bebas Neue, Barlow Condensed — requires internet

2. Architecture Overview

2.1 HTML Skeleton

index.html skeleton

```
<!DOCTYPE html>
<html lang='en'>
<head>
  <!-- meta, title, Google Fonts link -->
  <style> /* ALL CSS inline */ </style>
</head>
<body>
  <header>          <!-- Ghost SVG + stats bar -->
  <div.controls>    <!-- search input + wave filter buttons + toolbar -->
  <div.sync-bar>    <!-- export / import buttons -->
  <div#output>      <!-- dynamically populated by render() -->
  <footer>          <!-- disclaimer -->
  <script>
    const pops = [...]      // data array – 21 objects
    const waveColors = {...} // wave → hex colour map
    const waveFilters = [...] // filter button labels
    let activeWave, viewMode // UI state
    const owned = new Set(...) // loaded from localStorage

    function itemKey()      // unique key per figure
    function makeCard()     // builds a card DOM element
    function render()       // filters + renders the grid
    function updateStats()  // updates header counters
    function setView()      // grid / list toggle
    function exportCollection() // download JSON
    function importCollection() // read JSON file
    function showToast()    // feedback notification
  </script>
</body>
```

2.2 CSS Custom Properties (Design Tokens)

All colours, spacing and sizing are defined as CSS custom properties on `:root`. Change these values to retheme the entire application.

CSS custom properties — `:root`

```

:root {
  /* Backgrounds */
  --bg:      #04080f;    /* page background */
  --bg2:     #060c16;
  --surface: #080f1c;    /* card background */
  --surface2: #0c1526;   /* owned card background */
  --surface3: #101d32;

  /* Brand colours */
  --gold:    #c9a227;    /* primary accent – Destiny gold */
  --gold2:   #e8c547;    /* bright gold for headings */
  --gold-dim: rgba(201,162,39,0.10);
  --blue:    #4a9eff;    /* secondary accent – Ghost blue */
  --blue-dim: rgba(74,158,255,0.10);
  --green:   #22c55e;    /* owned / success */
  --red:     #ef4444;    /* error */

  /* Text */
  --text:    #dde8f5;    /* primary text */
  --text2:   #aabdd4;
  --muted:   #3d5570;    /* de-emphasised labels */
  --muted2:  #6a88aa;

  /* Borders */
  --border:   rgba(201,162,39,0.12);
  --border2:  rgba(201,162,39,0.28);

  /* Layout */
  --radius:   4px;
  --card-w:   168px;    /* min card width in grid */

  /* Class accent colours */
  --hunter:   #4a9eff;
  --titan:    #e05c3a;
  --warlock:  #9f7fe8;
}

```

2.3 JavaScript Module Map

The application is single-file, no modules. Execution order on page load:

- 1. `pops[]` and `waveColors/waveFilters` constants are declared
- 2. `owned` Set is initialised from `localStorage` (or empty)
- 3. Filter buttons are created and appended to `#filters` div
- 4. `updateStats()` is called — populates header counters
- 5. `render()` is called — builds and appends all card elements
- 6. Search input event listener is registered

3. CSS Reference

3.1 Component Classes

Selector	Purpose	Notes
.card	Individual figure card	clip-path angular corners (Destiny style)
.card.owned	Marked as owned	Green border + darker background
.card.le-card	Limited edition figure	Gold border + animated shimmer ::before
.card-img	Image container	175px height, geometric grid overlay
.card-body	Text area below image	Number, name, tags
.wave-badge	Wave label on image	Coloured pill, top-left of card-img
.owned-btn	Toggle owned / not owned	Top-right of card-img, angular clip-path
.le-badge	LE quantity badge on image	Bottom-centre of card-img, gold shimmer
.le-tag	LE quantity tag in card-body	Gold bordered tag in .card-tags
.chase-tag	Chase variant tag	Gold background in .card-tags
.glow-tag	Glow in the Dark variant tag	Blue background in .card-tags
.excl-tag	Exclusive retailer tag	Muted text with gold diamond prefix
.size-tag	Figure size tag (3.75", 6")	Colour-coded by size
.grid	Card container	CSS grid, auto-fill, --card-w min
.grid.list-view	List view mode	Single column, horizontal card layout
.sync-bar	Export/import controls	Between filters and grid
.stats	Header statistics bar	4 cells, clip-path parallelogram
.filter-btn	Wave filter button	Angular clip-path, gold active state

3.2 Limited Edition Card Styles

Limited Edition visual system

```
/* Card gets le-card class when data.le is truthy */
.card.le-card {
  border-color: var(--gold);
  box-shadow: 0 0 0 1px rgba(201,162,39,0.2),
              inset 0 0 24px rgba(201,162,39,0.04);
}
.card.le-card::before { opacity: 1; } /* always-on gold top line */
.card.le-card::after { opacity: 1; } /* always-on gold corner triangle */

@keyframes le-shimmer {
  0% { background-position: -200% center; }
  100% { background-position: 200% center; }
}

.le-badge-inner {
  background: linear-gradient(90deg, #7a520a, #c9a227, #e8c547, #c9a227, #7a520a);
  background-size: 200% auto;
  animation: le-shimmer 2.8s linear infinite;
}
```

3.3 Key Animations

Animation	Target	Description
rise	.card	Cards fade-in and slide up on render (staggered delay)
ghost-pulse	.ghost-icon	Ghost SVG glows in a breathing loop
gold-shine	h1 span	Title text has moving gold gradient
le-shimmer	.le-badge-inner	LE badge has a continuous gold shimmer sweep

4. Data Layer

4.1 Pop Object Schema

Pop object schema

```
// Every entry in the pops[] array follows this schema:
{
  num:   string,    // Funko catalogue number   e.g. '234'
  name:  string,    // Full display name         e.g. 'Cayde-6'
  wave:  string,    // Wave label             e.g. 'Wave 1' | 'Wave 2' | '2024'
  size:  string,    // Figure size            e.g. '3.75"' | '6"'
  excl:  string|null, // Exclusive retailer     e.g. 'GameStop' | null
  chase: boolean,   // Is a chase variant
  glow:  boolean,   // Glow in the Dark variant
  le:    string|null, // Limited edition qty   e.g. 'LE 2,000 pcs' | null
  col:   string,    // Accent hex colour for placeholder fallback
  imgk:  string,    // Image filename key (without .jpg)
                // Maps to: img/<imgk>.jpg
}
```

4.2 Complete Figures Catalogue

#	Name	Wave	Size	Exclusive	Chase	Glow	LE
234	Cayde-6	Wave 1	3.75"	-	-	-	-
235	Lord Shaxx	Wave 1	3.75"	-	-	-	-
236	Ikora Rey	Wave 1	3.75"	-	-	-	-
236	Ikora Rey (Translucent)	Wave 1	3.75"	Hot Topic	-	-	-
237	Zavala	Wave 1	3.75"	-	-	-	-
238	Oryx	Wave 1	3.75"	-	-	-	-
239	Xur (Agent of the Nine)	Wave 1	3.75"	GameStop	-	-	-
241	Atheon	Wave 1	3.75"	GameStop	-	-	-
241	Crota	Wave 1	3.75"	Target	-	-	-
241	Crota (Glow in the Dark)	Wave 1	3.75"	Target	Y	Y	-
337	Suraya Hawthorne	Wave 2	3.75"	-	-	-	-
338	Amanda Holliday	Wave 2	3.75"	-	-	-	-
339	Osiris	Wave 2	3.75"	-	-	-	-
339	Osiris (Gold)	Wave 2	3.75"	Bungie Store	-	-	-
340	Cayde-6 with Chicken	Wave 2	3.75"	-	-	-	-
341	Cayde-6 with Golden Gun (GTD)	Wave 2	3.75"	GameStop	-	Y	-
342	Sweeper Bot	Wave 2	3.75"	-	-	-	-
342	Sweeper Bot (GameStop Sticker)	Wave 2	3.75"	GameStop	-	-	-
343	Dominus Ghoul	Wave 2	3.75"	-	-	-	-
344	Emperor Calus	Wave 2	6"	-	-	-	-

#	Name	Wave	Size	Exclusive	Chase	Glow	LE
962	Cayde-6 (Glow in the Dark)	2024	3.75"	Bungie Store	-	Y	-

Note: No Destiny figure has a confirmed limited edition print run (LE x,xxx pcs). The le field is present in the schema ready to be populated when Funko releases one. No Destiny figure exists in the Funko Pop! Digital (NFT) line.

4.3 Wave Colour Map

waveColors map

```
const waveColors = {
  "Wave 1": "#4a9eff", // blue
  "Wave 2": "#c9a227", // gold
  "2024": "#f97316", // orange
};

// Used for: wave badge background, card hover border/glow,
//           placeholder text/number colour, filter button active state
```

5. JavaScript Functions

5.1 itemKey(data)

```
// Returns a unique string key for any pop object.
// Used as the identifier stored in the owned Set and localStorage.
function itemKey(d) {
  return d.num + '|' + d.name;
  // e.g. '234|Cayde-6' or '241|Crota (Glow in the Dark)'
}
```

Two figures can share the same num (e.g. both Crota variants are #241). Including the name makes the key unique.

5.2 makeCard(data, delay)

```
// Builds and returns a complete card <div> DOM element for one pop.
// Parameters:
//   data - pop object from pops[]
//   delay - float, CSS animation-delay in seconds (stagger effect)
//
// Steps:
// 1. Create .card div, add .owned and .le-card classes if applicable
// 2. Create .card-img div
//   a. Create <img> with src='img/<imgk>.jpg'
//   b. Create .placeholder div (shown if image 404s)
//   c. Add .wave-badge with wave label
//   d. Add .owned-btn - click toggles owned state in Set + localStorage
//   e. If data.le - add .le-badge with shimmer gold badge
// 3. Create .card-body div with num, name, tags
//   Tags: size-tag, chase-tag, glow-tag, excl-tag, le-tag
// 4. Add mouseenter/mouseleave for accent glow on hover
// 5. Return the assembled card element
```

This is the core rendering function. Each card is built fresh on every render() call.

5.3 render()

```
// Filters pops[] and re-draws the entire #output div.
function render() {
  const q = document.getElementById('search').value.toLowerCase();
  const f = pops.filter(p =>
    (activeWave === 'All' || p.wave === activeWave) &&
    (!q || p.name.toLowerCase().includes(q)
      || p.num.includes(q)
      || p.wave.toLowerCase().includes(q))
  );
  // Clears #output, creates .grid div, appends cards
  // Shows .empty state if f.length === 0
  // Updates countPill text
  // Calls updateStats()
}
```

Called on: page load, search input, filter button click, view toggle.

5.4 updateStats()

```
// Updates the 4 header stat counters.
function updateStats() {
  const t = allItems.length;           // total figures
  const n = owned.size;                 // owned count
  const pct = Math.round(n / t * 100); // completion %
  statOwned.textContent = n;
  statTotal.textContent = t;
  statPct.textContent = pct + '%';
  totalCount.textContent = t;           // in subtitle
  ownedCount.textContent = '\u2713 ' + n + ' owned';
}
```

allItems is a copy of pops[] declared at load time. It is never filtered — always reflects total catalogue size.

5.5 exportCollection()

```
function exportCollection() {
  const data = {
    version: 1,
    app: 'destiny-funko-pop', // identifies file type on import
    exported: new Date().toISOString(),
    owned: [...owned],        // Set converted to Array
  };
  const blob = new Blob([JSON.stringify(data, null, 2)],
    { type: 'application/json' });
  const a = document.createElement('a');
  a.href = URL.createObjectURL(blob);
  a.download = 'destiny-funko-owned-' +
    new Date().toISOString().slice(0,10) + '.json';
  a.click();
  URL.revokeObjectURL(a.href);
  showToast('Collection exported!', false);
}
```

Output filename example: destiny-funko-owned-2025-06-07.json

5.6 importCollection(event)

```
function importCollection(event) {
  const file = event.target.files[0];
  const reader = new FileReader();
  reader.onload = function(e) {
    const data = JSON.parse(e.target.result);
    // Validates: data.owned is Array
    // Validates: data.app === 'destiny-funko-pop'
    owned.clear();
    data.owned.forEach(k => owned.add(k));
    localStorage.setItem('destiny_owned',
      JSON.stringify([...owned]));
    render();
    showToast('Imported ' + owned.size + ' items!', false);
    event.target.value = ''; // reset so same file can be re-imported
  };
  reader.readAsText(file);
}
```

Validation prevents importing an Overwatch or other tracker's JSON by mistake.

6. Export / Import System

The tracker uses browser `localStorage` as primary storage and a JSON file for portability between devices. There is no server, no account, no sync service.

6.1 `localStorage`

`localStorage` schema

```
Key:   'destiny_owned'
Value: JSON array of itemKey strings

Example value:
["234|Cayde-6", "237|Zavala", "241|Crota (Glow in the Dark)"]

// Read on page load:
const owned = new Set(JSON.parse(
  localStorage.getItem('destiny_owned') || '[]'
));

// Written on every owned toggle:
localStorage.setItem('destiny_owned', JSON.stringify([...owned]));
```

6.2 Export JSON Schema

`destiny-funko-owned-2025-06-07.json`

```
{
  "version": 1,
  "app":     "destiny-funko-pop",
  "exported": "2025-06-07T14:32:10.000Z",
  "owned": [
    "234|Cayde-6",
    "237|Zavala",
    "241|Crota (Glow in the Dark)"
  ]
}
```

6.3 Cross-Device Workflow

- Device A — Mark figures as owned using the ✓ button on each card.
- Device A — Click 'Export Collection' in the Sync bar. A JSON file downloads.
- Transfer the .json file (email, cloud drive, USB, AirDrop, etc.).
- Device B — Open `index.html` in a browser.
- Device B — Click 'Import Collection' and select the .json file.
- Device B — State is restored instantly. `localStorage` is updated.

7. GitHub Pages Deployment

The tracker deploys to GitHub Pages as a static site with zero configuration. The export/import system and localStorage work identically on GitHub Pages.

Option A — Web UI (no Git required)

- Go to github.com and create a new repository (e.g. destiny-funko-pop).
- Click 'Add file' → 'Upload files'.
- Upload index.html and the entire img/ folder.
- Go to Settings → Pages → Source → Deploy from branch → main → / (root) → Save.
- Wait ~60 seconds. Site is live at <https://.github.io/destiny-funko-pop/>

Option B — Git CLI

Terminal commands

```
# From inside the destiny-funko-pop/ folder:
git init
git add index.html img/
git commit -m 'Initial release - Destiny Funko Pop tracker'
git branch -M main
git remote add origin https://github.com/<username>/destiny-funko-pop.git
git push -u origin main

# Then enable Pages in repository Settings → Pages
```

8. Adding New Figures

To add a new figure to the tracker, two steps are required:

Step 1 — Add the image

- Download the product image (JPG recommended, any resolution).
- Name it following the convention: -funko-pop-figure-destiny-.jpg
- Example: 1234-funko-pop-figure-destiny-pale-heart-guardian.jpg
- Place it in the img/ folder.

Step 2 — Add the data entry to pops[]

Adding a new figure

```
// Open index.html and find the pops = [ ... ] array.
// Add a new object at the correct position (keep waves grouped):
{
  num:   '1234',
  name:  'Pale Heart Guardian',
  wave:  '2025',           // add to waveColors & waveFilters if new
  size:  '3.75"',
  excl:  null,             // or 'GameStop', 'Target', etc.
  chase: false,
  glow:  false,
  le:    null,             // or 'LE 2,000 pcs' if numbered
  col:   '#4a9eff',        // fallback placeholder colour
  imgk:  '1234-funko-pop-figure-destiny-pale-heart-guardian',
},

// If this is a new wave, also add to waveColors and waveFilters:
const waveColors = {
  ...,
  "2025": "#06b6d4",
};
const waveFilters = [..., '2025'];
```

Limited Edition figure

Limited edition figure — le field

```
// Set le to the official print run string exactly as it appears on the sticker:
{
  ...,
  le: 'LE 2,000 pcs',
  ...
}

// The le-card class, gold border, animated badge and le-tag are all applied
// automatically by makeCard() when le is truthy. No CSS changes needed.
```

9. Full Source Code

The complete index.html source is reproduced below. Copy this verbatim into a file named index.html alongside the img/ folder to rebuild the tracker from scratch.

9.1 HTML Structure & Header

```

<body>

<header>
  <div class="header-bg"></div>
  <div class="header-stripes"></div>
  <svg class="ghost-icon" viewBox="0 0 100 100" xmlns="http://www.w3.org/2000/svg">
    <defs>
      <radialGradient id="gcore" cx="50%" cy="50%" r="50%"><stop offset="0%" stop-
color="#a8d8ff" stop-opacity="1"/><stop offset="100%" stop-color="#4a9eff" stop-opacity="0.7"/
></radialGradient>
      <filter id="glow-f"><feGaussianBlur stdDeviation="2.5" result="b"/><feMerge><feMergeNode
in="b"/><feMergeNode in="SourceGraphic"/></feMerge></filter>
    </defs>
    <polygon points="50,8 72,20 80,44 66,64 50,70 34,64 20,44 28,20" fill="none"
